```
The analogues are more potent and/or last longer than alpha-MSH and/or are more resistant to degredation by blood serum enzymes. They may be useful than alpha-MSH in diagnosis, therapy and research into hypopigmentation dysfunctions etc. (Updated on 25-MAR-2003 to correct PI field.)
                                                                                                                                                                                                                                                                                                                                                     New linear and cyclic alpha-melanotropin analogues - having increased potency and duration of action, used to stimulate melanocytes to produce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Alpha-melanotrophin; alpha-MSH; melanin; hypopigmentation.

The sequences given in AAR65782-88 are linear and cyclic peptides which may be used for bringing about a sexual response or for diagnosing psychogenic sexual dysfunction in males. These peptides specifically bring about penile exection, however at higher doses some stomach discomfort was noted. The peptides were prepared by standard methods of solid phase synthesis. (Updated on 25-WAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note= "Amidated C-terminal, forms peptide linkage with Asp2"

                                                                                                                                                                                              The terminal amino gp. of the peptide is joined (opt. via spacer) to chelating gp. The C-terminal of the peptide is amidated. The substit. on the side chain gp. of the residue in the 11-position is selected so that it does not significantly interfere with or impair the binding affinity of the peptide to the MSH receptors. The peptide is useful when labelled with a detectable element in in vivo diagnostic and therapeutic applications. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Linear petide #1 for treatment of male psychogenic sexual dysfunction.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         These erectogenic peptides (AAW19921-7) are used in a novel method for inducing penile erection in an animal. They can be used, in conjunction which testosterone or another androgen, to treat impotence in elderly men whose testosterone levels are declining with age. The peptides also appear to have an effect of increasing sexual response in females. They may therefore be administered to increase libido in female animals of rare species in captivity at the proper time in their oestrus cycle to make them more receptive to coitus. They may also be administered to the male animal at the same time to induce the erectlis response. The peptides may be used in artificial insemination programmes to encourage an animal, e.g. a stallion, to mount a mock female phantom used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Diagnosis and treatment of erectile dysfunction - by administering an erectogenic peptide containing the sequence Nle-Asp-His-D-Phe-Arg-Trp-

collection of sperm. The peptides invariably induce an erection in men at low doses (e.g. 1-10 mg) and without any detectable side effects when administered systemically. The peptides, at low doses, also allow detunescence following ejacutation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 These erectogenic peptides (AAW19921-7) are used in a novel method for inducing penile erection in an animal. They can be used, in conjunction with restosterone or another androgen, to treat impotence in elderly men whose testosterone levels are declining with age. The peptides also appear to have an effect of increasing sexual response in females. They may therefore be administered to increase libido in female animals of rare species in captivity at the proper time in their oestrus cycle to make them more receptive to coitus. They may also be administered to the peptides may be used in artificial insemination programmes to encourage an animal, e.g. a stallion, to mount a mock female phantom used in the

These analogues are used for stimulating melanocytes to cause darkening of the skin without the need to expose the skin to sunlight or UV radiation. They are used especially for normalising hypopigmentation
collection of sperm. The peptides invariably induce an erection in men low doses (e.g. 1-10 mg) and without any detectable side effects when administered systemically. The peptides, at low doses, also allow detumescence following ejaculation
                                                                                                                                                                                                                                                                                                    Lactam-bridged Ac-[Nle(4), Asp(5), D-Phe(7), Lys(10)]-alpha-MSH(4-10)-NH2

stimulating hormone (alpha-MSH). It is used to stimulate mammalian melanocytes to produce integumental melanin, i.e. to treat mammalian phypoligenetation such as pityriasis alba, tinea versicolor, vitiligo, idopathic guttae hypomelanosis and nevus depigmentosus. It can also be used to darken grey hair and to increase the value of animal pelts. The used to darken grey hair and to increase the value of animal pelts. The peptide can replace alpha-MSH, or its Nie4 analogue, in all diagnostic, therapeutic and research applications, e.g. localisation/characterisation of melanoma cells, and as ligand to deliver anticancer or diagnostic agents. Also treatment with the peptide darkens the skin without any exposure to UV light. In bioassays on frog skin and on lizard without any exposure to UV light. In bioassays on frog skin and on lizard skin, the present peptide had melanocyte dispersion activities of 0.7 and 8.0, respectively, relative to native alpha-MSH having activities of 1.0
                                 .

melanocytes to produce integumental melanin, i.e. to treat hypopigmentation such as pityriasis alba, tinea versicolor, vitiligo, idiopathic guttae hypomelanosis and nevus depigmentosus: It can also be used to darken grey hair and to increase the value of animal pelts. The peptide can replace alpha-MSH, or its Nle4 analogue, in all diagnostic, therapetutic and research applications, e.g. localisation/ characterisation of melanoma cells, and as ligand to deliver anticancer or diagnostic agents. Also treatment with the peptide darkens the skin without any exposure to VN light. In bioassays on frog skin and on lizard skin, the present peptide had melanocyte dispersion activities of 0.5 and skin, the cespectively, relative to native alpha-MSH having activities of 1.0 in both bioassay systems and showed prolonged activity in both assays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note= "C-terminal amide; the side-chain amino group of
Lys-NH2 at position 7 forms a lactam bridge with the side
-chain carboxyl group of Asp at position 2"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /note= "The side-chain carboxyl group of Asp at position 2 forms a lactam bridge with the side-chain amino group of Lys at position 7"

hypopigmentation such as pityriasis alba, tinea versicolor, vitiligo, hypopigmentation such as pityriasis alba, tinea versicolor, vitiligo, edicopathic guttae hypomelanosis and nevus depigmentosus. It can also be idopathic guttae hypomelanosis and nevus depigmentosus. It can also be used to darken grey hair and to increase the value of animal pelles. The used to darken grey large alpha-WSH, or its NIe4 analogue, in all diagnostic, therapeutic and research applications, e.g. localisation/ contracterisation of melanoma cells, and as ligand to deliver anticancer characterisation of melanoma cells, and as ligand to deliver the skin or diagnostic agents. Also treatment with the peptide darkens the skin without any exposure to UV light. In a bioassay on frog skin, the present peptide had a melanocyte dispersion activity of 5.0, relative to native alpha-MSH activity of 1.0 and also showed prolonged activity
        New cyclic peptide analogues of alpha-melanocyte stimulating hormone for treatment of hypo:pigmentation and for darkening human hair or animal pelts, have prolonged action.
                                                                                                   This peptide is a synthetic, cyclic analogue of human alpha melanocyte stimulating hormone (alpha-MSH). It is used to stimulate mammalian melanocytes to produce integumental melanin, i.e. to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          idiopathic guttae hypomelanosis; nevus depigmentosus; animal pelt.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human alpha-melanocyte stimulating hormone; analogue; alpha-MSH;

This peptide is a synthetic, linear analogue of human alpha melanocyte stimulating hormone (alpha-MSH). It is used to stimulate mammalian constituents to produce integumental melanin, i.e. to treat melanocytes to produce integumental melanin, i.e. to treat constituents to produce integumental melanin, i.e. to treat constituents to such as pityriasis alba, tinea versicolor, vitiligo, integrate hypomelanosis and newus depigmentosus. It can also be idiopathic guttes hypomelanosis and newus depigmentosus. It can also be used to darken grey hair and to increase the value of animal pelts. The used to darken grey hair and to its Nie4 analogue, in all diagnostic, peptide can replace alpha-MSH, or its Nie4 analogue, in all diagnostic, characterisation of melanoma cells, and as ligand to deliver anticancer or diagnostic agents. Also treatment with the peptide darkens the skin or diagnostic agents. Also treatment with the peptide darkens the skin or without any exposure to UV light. In bioassays on frog skin and on lizard with, the present peptide had melanocyte dispersion activities of and 0.08, respectively, relative to native alpha-MSH having activities of it in in both bioassay systems. The peptide also showed prolonged activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Metallo-construct; metal ion-binding backbone; cyclic;

The sequence is a specifically claimed example of new linear analogues of alpha-melanocyte stimulating hormone (alpha-MSH) having the general formula AA1-M1e-AA2-His-AA3-Arg-Trp-AA4-AA5, in which: AA1 = AC (i.e. acetyl) or AC-Ser-Tyr-Ser; AA2 = Glu or ASp; AA3 = D-Phe or Phe; AA4 = Lys, Gly, Orn (i.e. ornithine), Dab (i.e. 2,4-diaminobutyric acid) or Dr (i.e. 2,3-diaminopropionic acid); and AA5 = NH2 or Gly-Pro-Val-MH2. These analogues can be administered trans-cutaneously (e.g. topically) to treat skin hypo-pigmentation disorders, to darken grey hair, to enhance the value of animal pelts by darkening, or to darken the skin in the absence of solar or UV radiation. They could also be used in diagnostic or research applications for detecting melanoma cells, and for targeting drugs or diagnostic agents to tissues with a high concentration of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              alpha-Melanotropin peptide analogues - useful for darkening skin or hair,

                          Metallo-constructs comprising a metal ion-binding backbone for complexing metals - and a biological function domain which may be converted from inactive to active form on binding of the construct to a metal ion.
                                                                                                                                    ion and
                                                                                                             The specification describes a metallo-construct, which may be a peptide, comprising metal ion-binding backbone for complexing with a metal ion and a biological function domain which is conformationally constrained upon complexing the metal ion-binding backbone with a metal ion. The peptide/metal ion complexes are less susceptible to proteolysis than the uncomplexed peptide. The peptides lack conformational restriction if not complexed to a metal ion, so that the uncomplexed peptides are either inactive or low in potency. The complexed peptides may also exhibit altered biodistribution profiles, rate of clearance from the body and bioavailability. The constructs/peptides are useful as biological, therapeutic, diagnostic imaging and radiotherapeutic agents, or in combinatorial chemistry methods. The present cyclic peptide exemplifies the peptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Melanocyte stimulating hormone; MSH; melanotropin; pigmentation.

                 The sequence is a specifically claimed example of new linear analogues of alpha-melanocyte stimulating hormone (alpha-MSH) having the general formula AA1-NIe-AA2-His-AA3-Arg-Trp-AA4-AB5, in which: AA1 = AG (i.e. Ac-Ser-Tyr-Ser; AA2 = Glu or AB5), AA3 = D-Phe or Phe; AA4 = acetyl) or Ac-Ser-Tyr-Ser; AA2 = Glu or AB9; AA3 = D-Phe or Phe; AA4 = lines, Club or AB5, AB4 = AC-Ser-Tyr-Ser; AA2 = Glu or AB5; AB2 or Gly-Pro-Val-WH2. These (i.e. 2,3-diaminopropionic acid); and AA5 = NH2 or Gly-Pro-Val-WH2. These analogues can be administered trans-cutaneously (e.g. topically) to treat skin hypo-pigmentation disorders, to darken grey hair, to enhance the value of animal pelts by darkening, or to darken the skin in the absence of solar or UV radiation. They could also be used in dispnostic or research applications for detecting melanoma cells, and for targeting melanotropin receptors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /note= "Carboxyl side-chain of Asp2 forms a lactam bridge with the amino side-chain of Lys7"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cyclic peptide melanocortin analogues - useful as melanocortin receptor antagonists or agonists e.g. for research.

This sequence represents a specifically claimed cyclic lactam peptide of formula Ac-Nle-Asp-His-X-Arg-Trp-Lys-NH2 (I), (Asp and Lys are joined to make the ring). X = D-2'-naphthylalanine (Ia) or D-p-iodo-phenylalanine (Ib). These cyclic peptides are potent and specific antagonists of the two neural malanocortin receptors and of the peripheral receptor. (Ia) is a potent antagonist of the MC3 and MC4 receptors with partial agonist potent antagonist of the MC3 and MC4 receptors with partial agonist potent antagonist of the MC3 and MC4 receptors with partial agonist activity. Both peptides have antagonist activities in the classical frog skin bioassay for pigmentation at the MC1 receptors (Ib) is a studying the physiological role of these receptors and possibly for treating melanoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note= "Carboxyl side-chain of Asp2 forms a lactam bridge

    This sequence represents a specifically claimed cyclic lactam peptide of formula Ac-Nle-Asp-His-X-Arg-Irp-Lys-NH2 [1], (Asp and Lys are joined to make the ring). X = D-2'-naphthylalanine [Ta) or D-p-iodo-phenylalanine (Ib). These cyclic peptides are potent and specific antagonists of the two neural melanocortin receptors and of the peripheral receptor. (Ia) is a potent antagonist of the MC3 and MC4 receptors with partial agonist activity, and a full agonist of the MC1 and MC5 receptors; (Ib) is a potent antagonist of the MC3 and MC4 receptors with partial agonist activity. Both peptides have antagonist activities in the classical frog skin bioassay for pigmentation at the MC1 receptor. (I) are used for studying the physiological role of these receptors and possibly for blocking physiological responses to endogenous melanotropin, e.g. for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Alpha-MSH antagonist, alpha melanocyte stimulating hormone; human; POMC; proopiomelanocortin peptide; peripheral energy homeostasis; lipid mobilisation; lipidysis; lipid sequestration; body weight disorder; obesity; cachexia, anorexia; bulimia; wasting disorder; cancer; cardiovascular disease; type II diabetes; atypical depression; heart failure; immune system weakness; reproductive disorder;

The invention relates to methods and compositions for the regulation of body weight, and for the treatment of associated disorders, comprising the administration of a proopiomelanocottin (POMC) compound to peripheral cissues such that delivery to the central nervous system is minimised. The amount of POMC compound used is insufficient to alter appetite and is preferably in the range 0.1 microgram-10 mg/kg. The primary aim of the cinvention is therefore to effect weight regulation via the control of the lipid mobilisation and sequestration in adipose tissue (peripheral pathways of energy homeostasis) rather than via appetite modification (central pathways of energy homeostasis). The POMC compounds of the invention regulate fat stores in adipose tissue by altering free fatty contravation and wasting disorders in adipose tissue by altering free fatty cachest and/or lipolysis. The compounds can be used to treat or prevent disorders of body weight such as obesity, anorexia, bullmia, cachest, and masting disorders. They can be used to treat disorders that can be associated with low body weight (such as energy and disorders that can be associated with low body weight (such as heart failure, immune system weakness, amenorrhose and daypical depression), and disorders that the text reproductive disorders and the undesirable body weight changes that can be alde effects of certain pharmaceuticals. The compounds of the invantion incline melanowire etimin pharmaceuticals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ligand; melanocortin receptor; alpha-melanocyte stimulating hormone; MSH;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               invention include melanocyte stimulatory hormone (MSH) analogues. MSH agonists reduce body weight, while MSH antagonists increase body weight. The invention provides alpha-MSH peptide analogues (AAB11841-B1886) and also discloses a Pomc knockout mouse for the study of peripheral and central energy homeostasis pathways. Sequences AAB11885-B11886 represent alpha-MSH antagonists of the invention
                                                                                                                                                         Regulating metabolism with pro-opiomelanocortin compounds, useful e.g. for treating obesity, administered peripherally to minimize effects on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                neurophysiology, behavioural pattern, neurology, cardiovascular, metabolism, sexual dysfunction, nerve damage, therapy, cyclic.

    /note= "side chain carboxyl of this residue is linked to
the side chain amide of the Lys at position 7 by a lactam
bond to form a cyclic structure"
                                                                                                          /note= "Amidated C-terminus; side chain amide of this residue is linked to the side chain carboxyl of the Asp at position 2 by a lactam bond to form a cyclic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Peptides (AAY53555)-(AAY53563) represent synthetic ligands that selectively interact with melanocortin (MC) receptors, and exhibit biological activity in vivo. The peptides are modified from alphamelanocyte stimulating hormone (alpha-MSH) and show distinct neurophysiological effects displayed as behavioural patterns. The especially neurological, behavioural, cardiovascular, metabolic, sexual dysfunction, or nerve damage caused by other therapy. The peptides are specific for MC receptors, especially MC3, MC4 and MC5 receptors, and their activity has been characterized in vivo
                                                                                                                                                                                                                                                                                                                                                                                                     New peptides that selectively interact with melanocortin (MC) {\bf r} useful for treating disorders associated with MC receptors e.g. neurological and behavioral disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Length 7;

of this residue is linked to Lys at position 7 by a lactam
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Peptides (AAY53555)-(AAV53563) represent synthetic ligands that selectively interact with melanocortin (MC) receptors, and exhibit biological activity in vivo. The peptides are modified from alphanelanocyte stimulating hormone (alpha-MSH) and show distinct neurophysiological effects displayed as behavioural patterns. The peptides are useful for treating disorders associated with MC receptors, especially neurological, behavioural, cardiovascular, metabolic, sexual dysfunction, or nerve damage caused by other therapy. The peptides are specific for MC receptors, especially MC3, MC4 and MC5 receptors, and their activity has been characterized in vivo
                                                                                                                                                                                                                                                                                                                                                                               New peptides that selectively interact with melanocortin (MC) receptors, useful for treating disorders associated with MC receptors e.g. neurological and behavioral disorders.

(MSH), analogue or functional fragment in the treatment of scarring. This sequence represents an analogue of the human alpha-MSH. MSH is an inhibitor of proinflammatory cytokine production, a regulator of nitric oxide synthase and a stimulator of antiinflammatory IL-10 synthesis. MSH, or its analogues, is useful in the preparation of a composition for the treatment of scarring and chronic wounds, and for improving the appearance of existing scars, especially scarring associated with pulmonary fibrosis, muscular and neuronal trauma, intestinal obstruction, impaired vision and hearing (from scarring of corneal or tympanic membrane) are treated using compositions containing the MSH analogues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Use of a neuropeptide for prevention and treatment of scars and chronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /note= "This residue condenses with the Lys residue at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to the use of a melanocyte stimulating hormone

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptides (AAY53555)-(AAX53563) represent synthetic ligands that selectively interact with melanocortin (MC) receptors, and exhibit biological activity in vivo. The peptides are modified from alphamelanocyte stimulating hormone (alpha-MSH) and show distinct neurophysiological effects displayed as behavioural patterns. The peptides are useful for treating disorders associated with MC receptors, especially neurological, behavioural, cardiovascular, metabolic, sexual dysfunction, or nerve damage caused by other therapy. The peptides are specific for MC receptors, especially MC3, MC4 and MC5 receptors, and their activity has been characterized in vivo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New peptides that selectively interact with melanocortin (MC) receptors, useful for treating disorders associated with MC receptors e.g. neurological and behavioral disorders.
                                                                                                                                                                                                                                                                                           /note= "Amidated C-terminus; side chain amide of this residue is linked to the side chain carboxyl of the Asp at position 2 by a lactam bond to form a cyclic structure"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

This invention describes novel cyclic polypeptides (I) for inhibiting melanocortin receptors. (I) are useful for inhibiting melanocortin receptors and may be useful in treatment of learning and memory processes, sexual behaviour, regulation of body temperature and immune response and as a vehicle for drugs across the blood-brain barrier. They are ablectively antagonistic for the melanocortin, 3, 4 and 5 receptors. This sequence represents a melanocortin, 3, 4 and 5 receptors. This sequence represents a melanocortin antagonist described
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cyclic polypeptide useful for inhibiting melanocortin receptors comprise sequences with modified amino acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /note= "This residue condenses with the Lys residue at position 7 to form a cyclic peptide"
                                                                               /note= "This residue condenses with the Asp residue at
position 2 to form a cyclic peptide. C-terminal amide"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Antagonist, melanocortin, MC1 receptor; MC3 receptor; MC4 receptor; MC5 receptor; cyclic; inhibitor; treatment; learning; memory; drug; sexual behaviour; body temperature regulation; immune response;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes novel cyclic polypeptides (1) for inhibiting melanocortin receptors. (1) are useful for inhibiting melanocortin receptors. (1) are useful for inhibiting melanocortin processes, savual behaviour. regulation of body temperature and immune response and as a vehicle for drugs across the blood-brain barrier. They may also be used as research tools and for screening drugs. The peptides are selectively antagonistic for the melanocortin 1, 3, 4 and 5 receptors. This sequence represents a melanocortin antagonist described
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cyclic polypeptide useful for inhibiting melanocortin receptors comprise sequences with modified amino acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /note= "This residue condenses with the Lys residue at
position 7 to form a cyclic peptide"
                                                                                                                                                  /note= "This residue condenses with the Asp residue at
position 2 to form a cyclic peptide. C-terminal amide"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

(I) are useful for inhibiting melanocortin receptors and may be useful in treatment of learning and memory processes, sexual behaviour, regulation of body temperature and immune response and as a vehicle for drugs across the blood-brain barrier. They may also be used as research tools and for screening drugs. The peptides are selectively antagonistic for the melanocortin 1, 3, 4 and 5 receptors. This sequence represents a melanocortin antagonist described
                                                                                                                                                                                                                                         Cyclic polypeptide useful for inhibiting melanocortin receptors comprise sequences with modified amino acids.
            /note= "This residue condenses with the Asp residue at position 2 to form a cyclic peptide. C-terminal amide"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                              The present invention relates to treating erectile dysfunction in humans. The method involves administering an agonist of the melanocortin receptor in combination with a cyclic-GMP-specific phosphodiseterase inhibitor (CPI) or an alpha-adrenergic receptor antagonist (ARA). This combination provides effective treatment of either psychogenic or organic erectile dysfunction in a greater percentage of the affected population, provides for a shorter onset and longer duration of action and has fewer side effects than either member of the combination separately. The present sequence is melanotan-II. This peptide is a synthetic melanocortin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Agouti signalling protein; agouti related peptide; AGRP; ASP; obesity; eating disorder; antibody; probe; melanocortin; receptor.
                                                                                                                                                               Treating erectile dysfunction in human comprises administering melanocortin receptor agonist in combination with cyclic-GMP-specific phosphodiesterase inhibitor or alpha-adrenergic receptor antagonist.

                                                                                                                                                                          Agouti related peptides, their fragments, variants or derivatives may be used as modulators of feeding behavior (e.g. to treat obesity) and to generate anti-agouti-related polypeptide (AGRP) and anti-agouti-signaling protein (ASP) antibodies. Nucleic acids encoding these peptides may be used as hybridization probes in assays. The antibodies may be unithibit the binding of the AGRP/ASP peptide to melanocortin receptors or in in vitro or in vivo diagnostics. This control peptide is an AGRP analogue and was used in binding melanocortin receptor binding assays
                                                                                 e

                                 The present invention relates to a number of cyclic peptide analogues which function as melanocortin receptor ligands. The sequences are given in AAR29201-829246. These are useful in the treatment of body weight disorders including obesity, anorexia and cachexia, CNS depression, behaviour and memory-related disorders, cardiovascular function, finflammation, seppis, septic, cardiogenic and hypovolemic shock, sexual dysfunction, erectile dysfunction, muscle atrophy, diseases associated with nerve growth and repair and intrauterine foetal growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MT-II; piperidine; anorectic; antidiabetic; vasotropic; hypotensive; antilipemic; antiarthritic; osteopathic; cytostatic; hepatotropic; antidepressant; sedative; tranquilizer; antiaddictive; analgesic; antipyretic; antiinflammatory; immunomodulator; antirheumatic; MC-4R;

The invention provides substituted piperidines (I) of specified formula, and their pharmaceutically acceptable salts.(I) are agonists of human melanocortin receptor. an in particular, are selective agonists of human melanocortin receptor (MC-4R). (I) can be used to treat diseases or conditions responsive to the melanocortin receptor, obesity, diabetes mellitus, male or female sexual dysfunction and erectile dysfunction. (I) an also be used to treat hypertension, hyperlipidemia, osteoarthritis, cancer, gall bladder disease, sleep apnea, depression, anxiety, cancer, gall bladder disease, sleep apnea, thematonial and according according to the unity according to the unity according to the treatment of Alzheimer's disease. The present sequence ticluding the treatment of Alzheimer's disease. The present sequence represents the sequence of a centrally acting alpha-melanocyte-stimulating hormone analog, melanocan II (MT-II). MT-II is a synthetic cyclic heptapeptide containing a melanocortin receptor binding region
                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel melanocortin receptor-specific peptides useful for treating sexual dysfunction in mammals, including male sexual dysfunction such as erectile dysfunction, and female sexual dysfunction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Alpha-melanocyte-stimulating hormone; alpha-MSH; vasotropic; sexual response stimulator; sexual dysfunction; erectile dysfunction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  'note= "Linked to residue 7 to form a cyclic peptide"

                                                                    The present sequence is a peptide of alpha-melanocyte-stimulating hormone (alpha-MSH). alpha-MSH is a melanocortin receptor-specific peptide. This peptide can be used to produce a pharmaceutical composition, which can be used to stimulate sexual response in a mammal, to treat sexual dysfunction in mammal including male sexual dysfunction such as erectile dysfunction, and female sexual dysfunction

The invention relates to a method for treating sexual dysfunction in females comprising a vasoactive agent comprising a vasoactive intestinal polypeptide and/or agonist to agent comprising a vasoactive intestinal polypeptide and/or agonist to comprising a vasoactive intestinal polypeptide and/or andsor to the vagina and/or valvar region. The method is used for preventing condition and pain during intercourse, for treating vaginal itching and dryness, for enhancing sexual desire and responsiveness in females and for maintaining improvement of the tissue health of the female condition or absence of sexual fantasies and desire for sexual activity, deficiency or absence of sexual fantasies and desire for sexual activity, affigidity, sexual aversion, menopausal or post-menopausal state, multiple sclerosis, atherosclerosis, peripheral neuropathy, autonomic neuropathy, diabetes mellitus, substance-induced decreases in sexual desire and configuration muscle tone and tissue health, increases vaginal muscle tone and tissue health, increases vaginal configuration and minimises collagen misdeposition resulting from hypoxia. This sequence represents an alpha-melanocyte-stimulating hormone (alpha-melanocyte-stimulating hormone), used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                note= "Linked to residue 7 to form cyclic peptide"

                                                                                     The invention relates to novel 4-substituted N-acylated piperidine derivatives which serve as agonists of human melanocortin receptor (MC-4R). The invention is used for the treatment or prevention of disorders, diseases or conditions responsive to the activation of MC-4R in a mammal comparisons responsive to the activation of MC-4R in a mammal composity, diabetes mellitus, male or female sexual dysfunction, compulsion, hypertension, gall bladder disease, cancer, hyperlipidaemia, osteoarthritis, insomnia/sleep disorder, depression, anxiety, compulsion, neuroses, inflammation, sleep apnoea, substance abuse, pain, impotence, loss of libido, fever, immunomodulation, cheumatoid arthritis, skin tannin, acne and other skin disorders including the treatment of Alzheimer's disease, premature labour, sexual pain and dysmenorrhoea. The present sequence is alpha- melanocyte-stimulating hormone analogue, compared to the compared of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ..

The present sequence is a cyclic analogue of human alpha-melanocortin stimulating hormone (alpha-MSH). It is an alpha-MSH antagonist suitable catumulating hormone (alpha-MSH). It is an alpha-MSH antagonist suitable for use in a method of the invention. A claimed method of identifying compounds useful in regulating insulin resistance in obesity and type II diabetes involves administering a compound having MSH biological activity to a genetically modified non-human animal that has a genetic andification within 2 alleles of its Pome locus that result in an absence of proopiomelanocortin (Pomo) peptide activity, where administration of the compounds that decrease insulin resistance in the animal. He compound compounds that decrease insulin resistance in the animal. The compound compound activity is MSH or its fragment, homologue, peptide or non-peptide mimetic, or fusion protein. The compound to be evaluated is preferably an MSH antagonist. A claimed method of decreasing insulin resistance in mammal involves administering an MSH antagonist. Soluble MSH receptor, or an antibody that satisfy an expectable of MSH receptor, or an antibody that selectively binds to MSH a claimed method to treat diabetes associated with insulin resistance compraises administering a composition comprising an MSH antagonist that decreases insulin resistance
           Identifying compounds useful in regulating insulin resistance in obesity and type II diabetes by using a proopiomelanocortin null mutant non-human animal as a model.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The present sequence is a cyclic analogue of human alpha-melanocortin stimulating hormone (alpha-MSH). It is an alpha-MSH antagonist suitable for use in a method of the invention. A claimed method of identifying compounds useful in regulating insulin resistance in obesity and type II diabetes involves administering a compound having MSH biological activity to a genetically modified non-human animal that has a genetic modification within 2 alleles of its power locus that result in an absence of proopiomelanocortin (pow) peptide activity, where administration of the compounds that decrease insulin resistance in the animal. The compound compounds that decrease insulin resistance in the animal. The compound compounds that decrease insulin resistance in the animal. The compound cor non-peptide mimetic, or fusion protein. The compound to be evaluated or non-peptide mimetic, or fusion protein. The compound to be evaluated is preferably an MSH antagonist. A claimed method of decreasing insulin cresistance in a mammal involves administering an MSH antagonist. Cespecially an MSH action MSH receptor, or an antibody that can antibody that caption, a soluble MSH receptor, or an antibody that captor, or an antibody that his insulin resistance comprises administering a composition comprising an MSH antagonist that decreases insulin resistance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      o'
                                                                                                                                                                        Identifying compounds useful in regulating insulin resistance in obesity and type II diabetes by using a proopiomelanocortin null mutant non-human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Melanocortin-4 receptor agonist; 4-substituted N-acylated piperidine; derivative; obesity; diabetes; sexual dysfunction; cancer; inflammation; anorectic; antidiabetic; vasotropic; hypotensive; antilipemic; osteopathic; cytostatic; antidepressant; tranquilizer; antiadictive; analgesic; antipyretic; antirheumatic; antiarthritic; antiseporrhic; dermatcological; tocolytic; antiinflammatory; nootropic; neuroprotective; gynaecological.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to 4-Substituted N-acylated piperidine derivatives capable of acting as melanocottin 4 receptor antagonist. These can be used for the treatment or prevention of disorders, diseases or conditions responsive to the activation of the melanocottin-4 receptor in a mammal, e.g. obesity, diabetes mellitus, male or female sexual optsfunction, and erectile dysfunction, hypertension, hyperlipidemia, osteoarthrifis, cancer, gall bladder disease, sleep apnea, depression, anxiety, compulsion, neuroses, insomnia/sleep disorder, substance abuse, pain, impotence, loss of libido, fever, inflammation, immunomodulation, rheumatoid arthritis, skin tannin, acne and other skin disorders, neuroprotective and memory enhancement including the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                treatment of Alzheimer's disease, premature labour sexual pain or dysmenorrhea. The present sequence is a peptide agonist of melanocortin 4 receptor described in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                     treating,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                 New 4-subatituted N-acylated piperidine derivatives useful for treat e.g. obesity, diabetes mellitus, sexual dysfunction, osteoarthritis, cancer, acne Alzheimer's disease or dysmenorrhea.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .;

The present invention relates to new 4-substituted acylated piperidine derivatives or their salts. The invention is useful for the treatment or prevention of disorders, diseases or conditions responsive to the activation of the melanocortin-4 receptor in a mammal, e.g. obesity, diabetes mellitus, male or female sexual dysfunction, and erectile dysfunction, hypertension, hyperlipidaemia, osteoarthritis, cancer, gall bladder disease, sleep apnoced, depression, anxiety, compulsion, neurosis, insomnia/sleep disorder, substance abuse, pain, impotence, loss of inhido, fever, inflammation, immunomodulation, rheumatoid arthritis, skin thin, acne and other skin disorders, neuroprotective and cognitive and temnin, acne and other skin disorders, neuroprotective adiasease, premature labour sexual pain and dysmenorrhoea. The compounds of the invention are selective agonists of melanocortin-4 receptor. The present described in the invantion acid sequence represents a cyclic melanocatin-1 (MT-II) peptide, as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    4-substituted N-acylated piperidine derivatives useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to a novel method for bringing erection of the penis to an animal. This method involves administering synthetic peptides disclosed in the invention to a subject. The peptides and methods of the invention may have vasotropic activities. The peptides of the invention and may have vasotropic activities. The peptides of the invention penis and may be used to induce erection of the penis and may be used for diagnosis of psychogenic erection of the The method enhances libido (either by overcoming psychogenic sexual animals or bringing sexual receptivity in females) in animals. The present sequence represents a synthetic peptide of the invention which is shown to erection of the penis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cyclic petide #2 for treatment of male psychogenic sexual dysfunction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Linear, cyclic, sexual response, psychogenic sexual dysfunction; male, penile erection, stomach discomfort.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                          Bringing erection of the penis to an animal involves administering specific peptides.

treatment of male psychogenic sexual dysfunction - by erectogenic amt. of specified hepta- to deca-peptide amide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequences given in AAR65782-88 are linear and cyclic peptides which may be used for bringing about a sexual response or for diagnosing psychogenic sexual dysfunction in males. These peptides specifically bring about penile erection, however at higher doses some stomach discomfort was noted. The peptides were prepared by standard methods of solid phase synthesis. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Linear; cyclic; sexual response; psychogenic sexual dysfunction; male; penile erection; stomach discomfort.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cyclic petide #6 for treatment of male psychogenic sexual dysfunction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /note= "forms peptide linkage with Asp3, amidated C-

                                                                                                                                      Diagnosis and treatment of male psychogenic sexual dysfunction - by administering erectogenic amt. of specified hepta- to deca-peptide amide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note= "the side chain carboxyl group of Asp3 forms a lactam bridge with the epsilon amino group of Lys-NH2 at
                                                                                                                                                                                The sequences given in AAR65782-88 are linear and cyclic peptides which may be used for bringing about a sexual response or for diagnosing psychogenic sexual dysfunction in males. These peptides specifically bring about penile erection, however at higher doses some stomach discomfort was noted. The peptides were prepared by standard methods of solid phase synthesis. These erectogenic peptides (AAW19921-7) are used in a novel method for inducing penile erection in an animal. They can be used, in conjunction with the efforterore or another androgen, to treat importence in elderly men whose testosterone or another androgen, to treat importence in elderly men whose testosterone levels are declining with age. The peptides also appear to have an effect of increasing sexual response in females. They care species in captivity at the proper time in their osetrus cycle to make them more receptive to coitus. They may also be administered to the make them more receptive to coitus. They may also be administered to the make them more receptive to coitus. They may also be administered to the coccion animal, e.g. a sme time to induce the erectile response. The peptides may be used in ortificial insemination programmes to encourage an animal, e.g. a stallion, to mount a mock female phantom used in the collection of sperm. The peptides invariably induce an erection in men at low doses (e.g. 1-10 mg) and without any detectable side effects when administered systemically. The peptides, at low doses, also allow continuation programmes to encourage administered systemically. The peptides, at low doses, also allow
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Diagnosis and treatment of erectile dysfunction - by administering an erectogenic peptide containing the sequence Nle-Asp-His-D-Phe-Arg-Trp-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /note= "the side-chain carboxyl group of Asp2 forms a
lactam bridge with the epsilon amino group of Lys at
position 7"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

These erectogenic peptides (AAW19921-7) are used in a novel method for inducing penile erection in an animal. They can be used, in conjunction with the referosterone or another androgen, to treat importence in elderly men whose testosterone or another androgen, to treat importence in elderly men whose testosterone levels are declining with age. The peptides also appear to have an effect of increasing sexual response in females. They can be administered to increase libido in females animals of rare species in captivity at the proper time in their oestrus cycle to make them more receptive to coitus. They may also be administered to the mate animal at the same time to induce the erectile response. The peptides may be used in artificial insemination programmes to encourage an animal, e.g. a stallion, to mount a mock female phantom used in the collection of sperm. The peptides invariably induce an erection in men at low doses (e.g. 1-10 mg) and without any detectable side effects when administered systemically. The peptides, at low doses, also allow continued to the collection of specimal particles in the continued administered systemically. The peptides, at low doses, also allow
/note= "the epsilon amino group of Lys7 forms a lactam
bridge with the side-chain carboxyl group of Asp at
position 2"
                                                                                                                                                                                                                                                                                                                                                                                        Diagnosis and treatment of erectile dysfunction - by administering an erectogenic peptide containing the sequence Nle-Asp-His-D-Phe-Arg-Trp-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              alpha-melanotropin; proopiomelanocortin; hypopigmentation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New cyclic peptide analogues of alpha-melanocyte stimulating hormone -
for treatment of hypo:pigmentation and for darkening human hair or animal
pelts, have prolonged action.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This peptide is a synthetic, cyclic analogue of human alpha melanocyte stimulating hormone (alpha-MSH). It is used to stimulate mammalian melanocytes to produce integumental melanin, i.e. to treat hypopigmentation such as pityriasis alba, timea versicolor, vitiligo, idiopathic guttae hypomelanosis and nevus depigmentosus. It can also be used to darken grey hair and to increase the value of animal peles. The peptide can replace alpha-MSH, or its Nle4 analogue, in all diagnostic, therapeutic and research applications, e.g. localisation/ characterisation of melanoma cells, and as ligand to deliver anticancer or diagnostic agents. Also treatment with the peptide darkens the skin without any exposure to UV light. In a bioassay on frog skin the present activity of 1.0, (identical to native alpha-MSH)
                                                                                          /note= "The carboxyl group side chain of Asp at position 3 forms a lactam bridge with the side chain amino group of Lys-NH2 at position 8"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

Sequence 25, Application US/08349902B

Patent No. 5674839

PATENT WINFORMATION:

APPLICANT: Victor J. Hruby et al

TITLE OF INVENTION: Linear and Cyclic Analogs of

TITLE OF INVENTION: alpha-MSH fragments

NUMBER OF SEQUENCES: 34

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        COMPUTER READBLE FORM:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Indels
Sequence 34, Application US/08349902B
; Patent No. 5674839
; GENERAL INFORMATION:
APPLICENT: Victor J. Hruby et al
TITLE OF INVENTION: Linear and Cyclic Analogs of
TITLE OF INVENTION: alpha-MSH fragments
NUMBER OF SEQUENCES: 34
CORRESPONDENCE ADDRESS:
ADDRESSEE: Yahwak & Associates
STREET: 25 Skytop Drive
CITY: Trumbull
STATE: Connecticut

Patent No. 5674839
GENERAL INFORMATION:
APPLICANT: Victor J. Hruby et al
TITLE OF INVENTION: Linear and Cyclic Analogs of
TITLE OF INVENTION: alpha-MSH fragments
NUMBER OF SEQUENCES: 34
CORRESPONDENCE ADDRESS:
ADDRESSEE: Yahwak & Associates
STREET: 25 Skytop Drive
CITY: Trumbull
STATE: Connecticut
COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ZIP: 06611

Patent No. 5674839
GENERAL INFORMATION:
APPLICANT: Victor J. Hruby et al
TITLE OF INVENTION: Linear and Cyclic Analogs of
TITLE OF INVENTION: alpha-MSH fragments
NUMBER OF SEQUENCES: 34
CORRESPONDENCE ADDRESS:
ADDRESSEE: Yahwak & Associates
STREET: 25 Skytop Drive
CITY: Trumbull
STATE: Connecticut
COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             COMPUTER READABLE FORM:

Sequence 21, Application US/08349902B

Patent No. 5674839

GENERAL INFORMATION:

APPLICANT: Victor J. Hruby et al

TITLE OF INVENTION: Linear and Cyclic Analogs of

TITLE OF INVENTION: alpha-MSH fragments

TITLE OF INVENTION: alpha-MSH fragments

TITLE OF INVENTION: alpha-MSH fragments

TOMBER OF SEQUENCES: 34

CORRESPONDENCE ADDRESS:

ADDRESSEE: Yahwak & Associates

STREET: 25 SKYCOP Drive

CITY: Trumbull

STATE: Connecticut
